

CHECKING MICROSOFT EDGE

Checking your version of Microsoft Edge is as simple as these easy steps. Follow the following instructions, and you should be able to check your Microsoft Edge version.

This guide will show you how to manually trigger Edge to check for updates and install them if they are found.

1. Click on the Main Menu button

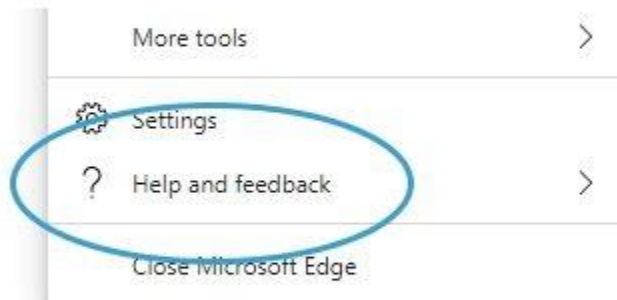

First, make sure you are running Microsoft Edge and then click the Menu button in the top-right corner of the screen. It looks like three small dots next to each other.

This will reveal the main Edge menu.

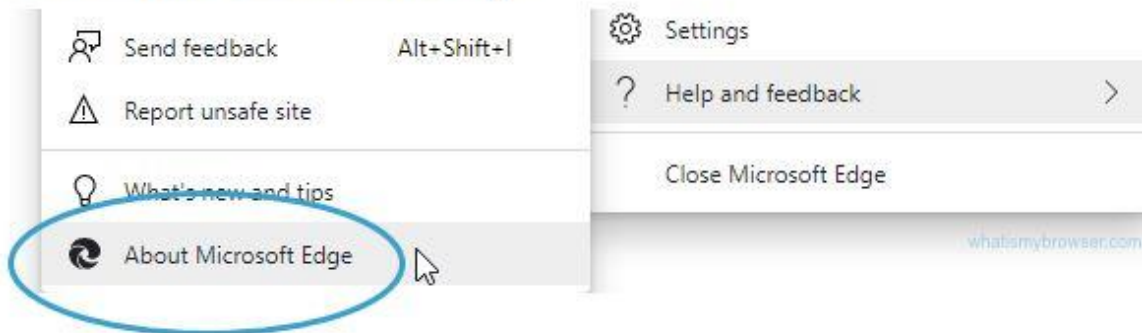

2. Hover over the "Help and Feedback" menu item

The main Edge menu is quite tall; down the bottom you'll see an item named **Help and feedback**.

When you hover over the **Help and Feedback** menu item, a sub-menu will appear.

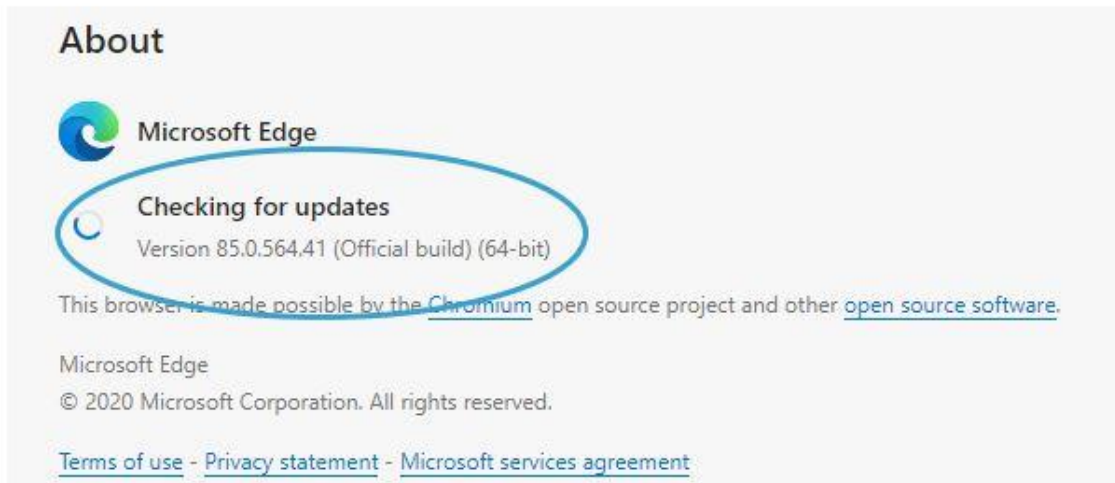

3. Click "About Microsoft Edge"

This will open the "About" screen for the Edge – it contains information about Edge version and will also cause Edge to check that it's up to date.

4. Edge will automatically check for updates

The About screen for Microsoft Edge will automatically start checking if updates are available. Please wait a few seconds for it to contact Microsoft for the latest version.

If it finds that there is a newer version of Edge available, it will download and install the update.

Once it's done, Congratulations! You're now running the latest version of Microsoft Edge!

Google Chrome should check for updates and install them automatically, but sometimes the process fails or is delayed, so this will give you peace of mind that you have the latest version.

Running the latest version of your web browser is an important step in being safe and secure online.
