

# CHECKING SAFARI

Checking your version of Safari is as simple as these easy steps. Follow the following instructions, and you should be able to easily check your Safari version.

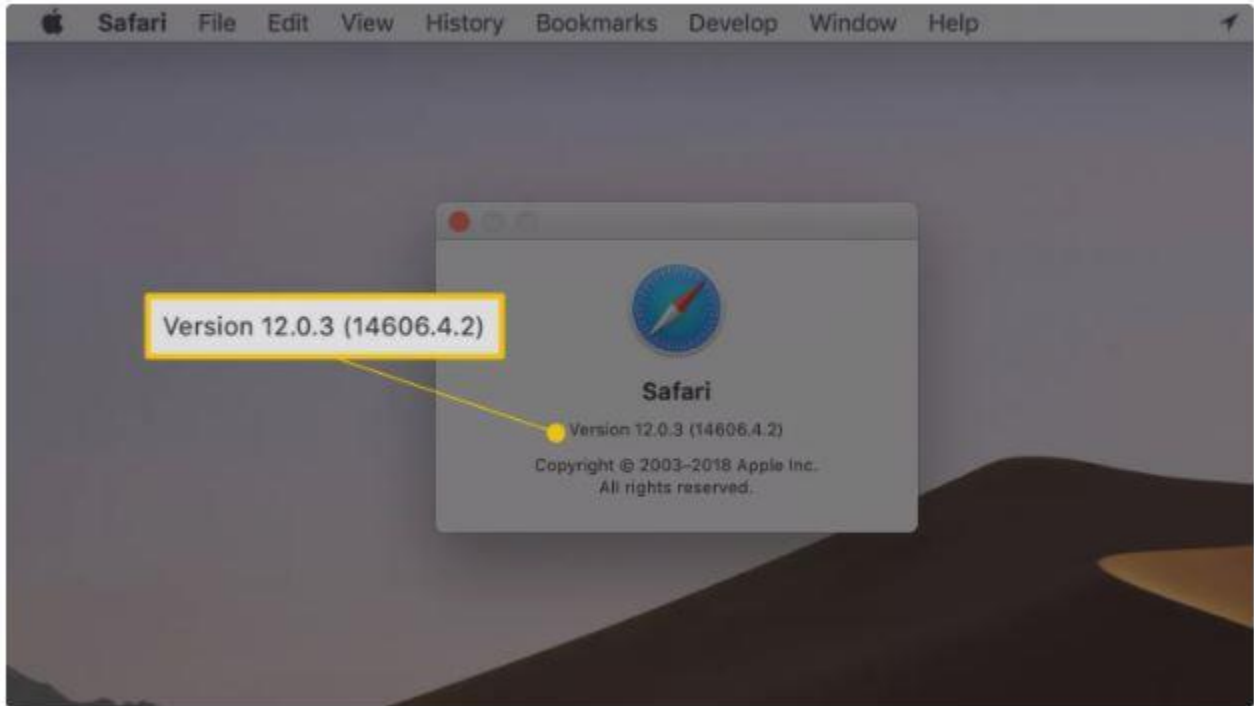

1. Go to the dock or Applications folder and select the **Safari** icon to open the Safari browser

2. Choose **About Safari** under the **Safari** menu.

3. A small window appears with the browser version number.

4. The first number, located before the parenthesis is the current version of Safari.

And there you have it!

Running the latest version of your web browser is an important step in being safe and secure online.

The macOS System Status normally notifies you of any OS updates. However, you can check for updates manually by looking in the App Store via Updates if you wish to do it manually.
